SUMMARY

Software Engineer with a background in front end development and production support. Experienced in building applications, modernizing existing systems, and improving user experience through practical engineering solutions. Skilled in incident resolution, root cause analysis, and cross-functional collaboration, with a focus on creating maintainable systems and long-term system reliability while balancing immediate business needs.

WORK EXPERIENCE

Front End Developer

CDI Credit

Sandy Springs, GA

Jan 2025 – Jul 2025

- Contributed to the architectural evaluation and selection of Next.js for the migration of legacy ASP.NET 4.8 applications, then implemented frontend components to support the transition.
- Refactored legacy codebase and removed outdated dependencies with the use of git branching strategies to eliminate downtime.
- Owned manual responsive-testing pass across the Next.js migration and fixed mobile navigation issues before production release.

Production Support Specialist

Insight Global

Sandy Springs, GA

Feb 2022 – Dec 2024

- Resolved 200+ production incidents across enterprise applications serving 5,000+ users nationwide while sustaining 99% SLA compliance.
 - Provided L3 application and production support, serving as primary point of contact and handling 80+ tickets per month.
 - Diagnosed root causes across application, configuration, and access-layer issues using structured log analysis on high-volume enterprise systems.
 - Proactively identified and resolved issues via system alert monitoring, reducing unplanned downtime.
 - Reduced production regression rate by partnering with engineering/QA to validate fixes prior to release.
 - Validated configuration changes across 4 environments (dev, QA, staging, prod) to ensure reliable release cycles.
 - Designed and implemented validation workflows and documentation from scratch, standardizing release process across the support org.
 - Standardized escalation documentation format, reducing back-and-forth between support and engineering.
 - Participated in Agile/Scrum ceremonies including daily standups, sprint planning, and retrospectives, tracking support-driven changes via story points and Jira boards through sprint cycles.
 - Authored 30+ knowledge base articles and runbooks documenting recurring issues and troubleshooting procedures.
-

PROJECTS

Laylo Cafe Website (laylocafe.com)

- Architected an AI-assisted Shopify theme development workflow (21st.dev MCP, Higgsfield MCP, Impeccable), building custom Liquid components that let the client independently manage product updates post-launch.

EqualJusticeStudios.com

- Designed and shipped a client website end-to-end in WordPress, translating stakeholder requirements into site architecture and delivering full ownership transition.

Boycott1902.com

- Took ownership of an in-progress WordPress project as a contractor, maintaining site stability and managing client delivery independently.

Personal Portfolio Website

Next.js, React, Tailwind CSS, JavaScript, HTML5, CSS3

- Built a modular Next.js portfolio using App Router and reusable React components as a testbed for component architecture and routing patterns.

Maskimum Carnage

Unity, C# | Global Game Jam 2026

- Shipped a playable Unity/C# fighting game prototype in 48 hours, implementing enemy AI, power-up systems, and progression mechanics under aggressive scope constraints.

Tic-Tac-Toe Engine

C

- Engineered a C-based game engine with bitmap board representation, reducing win-condition checks toward constant-time complexity.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, Java, C, C++, SQL, HTML5, CSS3

Frameworks & Libraries: React, Next.js, ASP.NET 4.8.1, Mongoose

APIs & Data: REST APIs, MongoDB, Kafka, Elasticsearch

Developer Tools: Git, GitHub, VS Code, Postman, Jira, Confluence, ClickUp, Figma

Cloud & Platforms: AWS, Linux, Windows, macOS, Bash/Shell Scripting, CI/CD

Production & Operations: Incident Management, Root Cause Analysis, API Troubleshooting, Log Analysis, System Monitoring, SLA Compliance, Ticket Triage, Configuration Management

Software Engineering: Data Structures & Algorithms, Object-Oriented Programming, Software Testing, Debugging

Languages: English, Mandarin Chinese

EDUCATION

Kennesaw State University

Kennesaw, GA

Bachelor of Science in Computer Science

Senior Project: CloudSim: Task Scheduling in the Cloud

Relevant Coursework: Data Structures, Algorithm Analysis, Database Systems, Operating Systems, Software

Architecture & Design, Software Testing & QA, Internet Programming, Parallel & Distributed Computing, User

Interface Engineering, Computer Graphics & Multimedia, Cryptography, Cloud Software Development, Concepts of

Programming Language
